

It's all about aesthetics...

26 September

2.30 - 3.30

D26

Teaching lab 3

Tired of ggplot2's default colour palette and grey background?

Want to change the typeface of your text?
Wondering how to spice up your legend?

While ggplot2 is undoubtedly one of the best packages to visualise data, we seldom make the most out of its themes and customisation options. Using different themes can help improve the aesthetics of our figures and add visual interest to our audience.

In this workshop, you will learn how to create and apply your own customised themes to your figures.

Hosted by Jess Tam
